Response to Amendment

1. The Amendment filed on 09/23/2003 has been entered and made of record.
2. Applicant's arguments with respect to claims 1-3, 5, 8-10, 13-16, 19-22, 24-26 and 28-30 have been considered but are not persuasive for the following reasons.

Applicant alleges claims 1, 13 and 24 now also comprise distinguished features "form filling instructions residing on said first computer for creating a filled form by filling in said blank form using a fuzzy fill procedure". In response to the applicant's argument the reference does not teach creating a filled form in said blank form using fuzzy fill procedure, examiner reviewed the specification of the instant application and was not able to find any support for limitation creating a filled form "using a fuzzy fill procedure". Examiner interprets the above limitation as filling a blank using an automated procedure by extracting data to fill in said blank form (col. 1, lines 18-59).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 13 and 24 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The subject matter "using fuzzy fill procedure" in claims 1, 13 and 24 are not

Art Unit: 2157

described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 1-3, 5, 8-10, 13-16, 19-22, 24-26 and 28-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Markus U.S. Patent No. 6,499,042.

As per claims 1, 13 and 24, Markus discloses a system for automating data transactions between computers servers, comprising:

- a first computer server fig. 2, element 15) maintaining a database having stored data recorded therein, said stored data comprising general user information (user's personal data) relating plurality of servers(see fig. 2, and col. 1, lines 18-59);

Art Unit: 2157

- program code (applet) residing on said first computer server for creating extracted data by selectively extracting said stored data responsive to a request (see fig. 2, and col. 1, lines 18-59 and col. 3, lines 20-65); and
- additional program code residing on said first computer server for obtaining a blank form, and for parsing said blank form to identify which of said extracted data should be used to fill in at least a part of said blank form (see fig. 2, and col. 1, lines 18-59 and col. 3, lines 20-65).
- form filing program residing on the on the first server for creating a filled form in said blank form using a fuzzy fill procedure(using an automated fill procedure) (see col. 1, lines 17-39)
- submitting the automatically filled to a seconder server (sending the filled to a selective proxy) (see col. 3, lines 20-64 and col. 1, lines 18-59).

In considering claims 2, 14 and 25, Markus discloses a system, wherein said extracted data includes data for all fields in said blank form (col. 1, lines 18-59).

In considering claims 3, 15 and 26, Markus discloses a system, wherein said blank form is obtained from a second computer server (form originating server) (see fig. 2, element 14).

Art Unit: 2157

In considering claims 5 and 16, Markus discloses a system, wherein said blank form is a login form (col. 3, lines 20-65).

In considering claims 8, 19, 28 and 30, Markus discloses a system, further comprising:
an additional database maintained at said first computer server (see col. 1, lines 18-59 and col. 3, lines 20-65);
additional database having stored form data recorded therein (see col. 1, lines 18-59 and col. 3, lines 20-65);
stored form data relating to forms required by at least one other computer server (see col. 1, lines 18-59 and col. 3, lines 20-65).

In considering claim 9, 20 and 29, comparing data fields in said blank form with said stored form data recorded in said additional database (is inherent, see also col. 3, lines 20-64).

In considering claims 10 and 21, Markus discloses a system wherein said stored form data includes parsed form data from said at least one other computer server (see col. 1, lines 18-59).

In considering claim 22, Markus discloses a system further comprising:
as result of parsing filling in said blank form (see col. 1, lines 18-59 and col. 3, lines 20-65).
